

---

## 2. Testing out if we blow up the machine

- ▶ Type ``source("/home/user_test.R")`` into your console.
- ▶ This will run all the necessary computations in this workshop. Single run should take 6 minutes.

---

### 3. In case of major failure

- ▶ In case where files need to be changed for everyone, system admin can run ``sudo rm`` or ``sudo git clone`` to edit all files on disk.
- ▶ Users can just type ``source("/home/omg.R")`` into your console to edit the files on WD.
